

替换空格

请实现一个函数，把字符串 *s* 中的每个空格替换成"%20"。

示例 1:

输入: *s*="We are happy."

输出: "We%20are%20happy."

```
class Solution {
public:
    string replaceSpace(string s) {
        string ret;
        for(auto c:s)
        {
            if(c==' ')
            {
                ret.push_back('%');
                ret.push_back('2');
                ret.push_back('0');
            }
            else
                ret.push_back(c);
        }
        return ret;
    }
};
```
